

Codebook: County- or CZ-Level Outcome Variables

Introduction:

This codebook lists the variable names and their definitions used in county- or commuting-zone-level datasets of child outcomes by parental income percentile and child race. Each file reports outcomes for children born between 1978 and 1985, measured in 2020. Variables are described below. Each row in these datasets represents a unique combination of county (or commuting zone), child race, and parental income percentile.

Variable Name	Type	Description
par_state	Num	State FIPS code (2010 definition) (county files only)
par_county	Num	County FIPS code (2010 definition) (county files only)
par_cz	Num	Commuting zone code (cz files only)
kid_race	String	Child's race (AIAN, Asian, Black, Hispanic, White)
par_pctile	Num	Parental national income percentile (25, 50, 75, or -9 for average)
[geo]_name	String	Name of geography can be county or cz
shrunk_xkid_vscore2020	Num	Average Vantage 4.0 Score in 2020
shrunk_xkid_stubalance2020	Num	Average student loan balance in 2020
shrunk_xkid_mtabalance2020	Num	Average mortgage balance in 2020
shrunk_xkid_aubalance2020	Num	Average auto loan balance per child in 2020
shrunk_xkid_brcbalance2020	Num	Average credit card balance per child in 2020
shrunk_xkid_delinq90_02020	Num	Fraction of individuals with a 90+ day delinquency between 2016 and 2020 (%)
shrunk_income_resid_2020	Num	Average residual from a regression of any 90+ delinquency on 2016 household income rank

Notes:

- If a file includes “cty” in its name, the unit of analysis is county; if it includes “cz”, the unit is commuting zone.
- par_pctile of -9 denotes the average outcome in the county.
- All balance and outcome variables are measured in 2020.
- Race categories: AIAN = American Indian and Alaska Native.
- We do not include county names for Puerto Rico as Puerto Rico does not officially have counties.
